Designing Corridors for High-Speed Rail

CASCADIA TRI-CORRIDOR PLAN

New CHSR's C-ICE/CCE Corridor, Vehicle Expressway Corridor, and Freight Train Corridor on the Cascadia Multimodal Bridge and I-5 Bridge Seismic Upgrade

New Cascadia Multimodal Bridge over the Columbia River connecting Oregon and Washington with:

#1 Corridor: Phase 1 of the new Cascadia High Speed Rail (CHSR) corridor includes the C-ICE and CCE train systems between the Portland Rose Quarter and NW 78th Street in Vancouver, WA. This 11.23 mile segment is the first phase of the 169 mile CHSR corridor between Portland and Seattle. (See cascadiahighspeedrail.com).

#2 Corridor: The new 6.48 mile four-lane vehicle expressway between Hwy 30 in Portland and Mill Plain Blvd in Vancouver, WA extends an additional 1.5 miles to the I-5 interchange via the existing Mill Plain Blvd/ W 15th St couplet.

#3 Corridor: The new Burlington Northern-Santa Fe Railroad and Union Pacific Railroad track connection equals 3.15 miles between N Interstate Ave and N Columbia Blvd in Oregon. The Washington segment extends 3.23 miles from the state line in the middle of the Columbia River north to W 39th Street. Both new corridors connect to existing on-ground freight rail corridors.

Cascadia Tri-Corridor Plan in Oregon and Washington

- #1. This segment will transport the CHSR's C-ICE and CCE trains.
- #2. This is the proposed new vehicle expressway between Hwy 30 and Mill Plain Blvd/W 15th St, connecting to I-5 in Vancouver.
- #3. This segment will transport the BNSF and UPRR freight trains over the Cascadia Multimodal Bridge.
- #4 This segment is the UPRR ramp to the Cascadia Multimodal Bridge.

Rose Quarter Transportation Hub with CHSR Station

The CHSR Station has five rail tracks for Cascadia Inter-City Express (C-ICE) trains and Cascadia Commuter Express (CCE) trains.

The station platform is 1300 feet long and 146 feet wide.

Tracks 1 and 2 are C-ICE. Tracks 3 and 4 are CCE. Track 5 is the Troutdale route.

Transportation
Hub

PROPOSED BUILD OUT AND ROSE QUARTER TRANSPORTATION HUB BY CHSR

The Rose Quarter Transportation Hub

The proposed phased development is to coincide with the CHSR station and mixed-use opportunities

CHSR between
Rose Quarter
and Swan Island

The HSR flyover is
located below the
Fremont Bridge
and above
N Going Street.

Cascadia
Tri-Corridors
North of Swan
Island

Freight rail will
intersect to gain
access to the
Cascadia
Multimodal
Bridge.

The CHSR tunnel
is below N.
Woolsey Avenue.

New Vehicle Expressway Interchange from Hwy 30 to New Double Deck Bridge over the Willamette River to Vancouver

This new vehicle expressway will relieve traffic congestion on the I-5 corridor.

Vehicle Expressway Through the BNSF Cut between the Willamette and Columbia River

The flyover has two lanes per deck between Hwy 30 and N Columbia Boulevard

The existing Willamette Blvd, N Lombard St, and the N Fessenden St Bridges will require replacement.

A commuter station below the Willamette Blvd Bridge is possible

N Columbia Blvd
Interchange with
the CHSR/Cascadia
Commuter Express
Corridor and
Vehicle
Expressway

CHSR Corridor and the Cascadia Multimodal Bridge Over the Columbia River

The proposed Cascadia Multimodal Bridge has a clearance between the river and the bridge bottom of up to 170 ft.

Vehicle lanes at Hayden Island will switch from the bottom deck to the top deck. Corridor grade is 1.3%.

This bridge is a safe distance from PDX Airport and will not interfere with air traffic.

Proposed
Cascadia
Multimodal
Bridge,
Hayden Island
Bridge, and
Existing I-5
and BNSF
Railroad
Bridge

The possible
CCE Waterfront
Station is on the
west side of the
existing BNSF
tracks. The
Amtrak Station is
on the east side.
A pedestrian
bridge over the
BNSF tracks will
provide a
connection to
the Vancouver
Waterfront.

BNSF RR Bridge

Columbia River

The Proposed Cascadia Multimodal Bridge's Lower Deck is for CHSR and Freight Rail Corridors and the Upper Deck is for Vehicles

The existing BNSF Bridge is an average of 230 ft east of the Cascadia Multimodal Bridge.

Cascadia Multimodal Bridge Concept

The Cascadia Multimodal Bridge has two foundations in the Columbia River, and three foundations on land.

EXISTING MAX FAR (1:1) = 1.8 mil. SF

VANCOUVER
WATERFRONT

CHSR and Vehicle Expressway at E Mill Plain Boulevard Area

This is the end of the vehicle expressway between Hwy 30, Columbia Blvd, Marine Drive, and Mill Plain Blvd.

Traffic signals are needed to allow safe interchanges.

The CHSR and BNSF/UPRR are above the vehicle expressway.

- #1 Traffic signals to allow vehicle interchanges.
- #2 Push button for pedestrians and bicycle riders to allow safe crossings.

Vehicle Expressway
Connection to and
from I-5 via E Mill
Plain Blvd and
E 15th St

The northbound Fruit
Valley vehicles turn left
onto Columbia St, then
left onto E 15 St, and
then go west to
intersect with Fruit
Valley Rd.

#1 = E Mill Plain Blvd
#2 = E 15th St
#3 = Columbia St
#4 = Lincoln Ave
